

The Pixel Cereal Tile Sets have nothing technically different you should worry about.

This set requires the Unity 2d extras to be installed in order to make use of the Tile Rules.

This set is composed of a 47 tile blob image structured in such a way that there are no tile duplicates, and it has the flexibility to join itself and branch out in any shape. It does not include slopes.

The artistic side of the asset is what makes it more than great, because it is fine built in such a unique way that it keeps a coherent perspective all over the set. Also, there is fine tweaking all around to give variety to each tile to break the visual repetition. Then, filling the tile top to bottom allows you to keep a size consistency for other assets to match on top of the surface.

If you wish to give a touch of your own style to match your assets, maybe you will have to bring the tile set image into pixel art software or image editing software, and change the colors.

Part of the art of graphic assets is about consistency, so, if your other assets use a different outline color, you might want to replace the black line art of the tile set to match yours, or maybe you would like to replace the whole coloring with a different palette to match your environment. All this is up to you.

-----

Usage

- Create a 2d Object / Tile map / Rectangular type of game object
- Open the Tile Palette window
- Select the correspondent Palette you want to work with
- Select your active tile map you wish to paint on
- Click on the lonely tile on the Palette Window
- Pick the Paint With Active Brush (B) tool on the Palette Window
- Paint and enjoy!

Thank you for purchasing this asset!
